

Neoflux's latest innovation in the Diaphragm Pump Industry is its *Neo-Flo* Air Distribution System . It delivers control & flexibility with the groundbreaking *Neo-Tune* design. This design empowers users to contrive the flow they want. You can control the flow rate & air consumption with simply adjusting the Air Knob located on top of the Center Section giving you the flexibility, reliability & efficiency needed in today's energy conscious & performance driven application.

***Neo-Tune*** design allows each pump to be finely tuned by adjusting air volume at pump inlet with a variable control dial. By turning the dial, you can either maximize the flow to get the job done fast, or you can maximize the efficiency to reduce processing cost.

**NEOFLUX THE FLOW**  
**WITH**

**Only 3 moving parts means Fewer Replacements**

*The Unbalanced & Non-stalling  
Air Valve Spool*

*The Main Shaft*

*The Pilot Spool*

**Lube-Free Operation Design**

Advanced Air Valve Spool eliminates the problem of freezing during the cycle and conduct a lube-free operation

**Greater Discharge per CFM input**

Neo-Flo Air-Distribution System starts operating at only 2 Bar (29 PSIG)  
Air Pressure – Less Air Consumption Saves Power

Inspection of *Neo-Flo* Air Distribution System can be done without removing the pump from service

With *Neo-Muff* Silencer, noise reduction as low as 75 db. Silent Operation. (OSHA Compliant)

Options of All metal as well as Plastic Air Distribution System & Center Block

**CONTRIVE THE FLOW  
WITH**

**Neo-Tune**

CONTROL THE FLOW

***Air Adjustment Knob***

This design incorporates Air-Regulator for discharge efficiency.

High performance with lower operational cost

Operational flexibility & higher flow rate

Simple & easy to control the flow rate

Entirely Submersible

AN

**OSCILLATING** TECHNOLOGY

THAT *SHRIVELS* YOUR COST OF OWNERSHIP
